**SEEDS & SUPPLIES CATALOGUE**

[gerriesfarmmarket.ca](http://gerriesfarmmarket.ca)

Greetings Folks

It seems 2024 flew by at a record pace. It presented some challenges again, with a wet spring and dry late season in most of southern Ontario. Despite the weather and disease pressure, most of us still had a bountiful harvest; we have much to be thankful for! We trust our Creator who does not change, even though things around us seem to keep changing.

Looking into next season, we are optimistic about supply and timing, hoping the current postal strike (as I write this) won't leave lasting repercussions. With Stokes Seeds dropping flower seeds, we have added some varieties to our inventory. We can also get in special order items from other suppliers in their packaging, with the 10% surcharge on small amounts.

We continue to wish you success in your gardening adventures, and in your family and community.

*The Gerrie family and staff*

## **DISCLAIMER**

Gerrie's Farm Market Inc believes in delivering a quality product to our customers. However, seed and/or plants are live products and depend on many important grower skills including, planting time, seed depth, type of soil, proper use of fertilizers etc, and weather conditions, which are out of our control. By acceptance of our products the buyer agrees not to hold Gerrie's Farm Market Inc responsible. At any time, Gerrie's Farm Market Inc will not be liable for more than the purchase price of the product.

Please note all descriptions and information in this catalog are based on our observations and/or from other sources. Actual yields and characteristics will vary according to weather conditions, soil types, etc.

# Safe Seed Pledge

Agriculture and seeds provide the basis upon which our lives depend. We must protect this foundation as a safe and genetically stable source for future generations. For the benefit of all farmers, gardeners and consumers who want an alternative, **we pledge that we do not knowingly buy or sell genetically engineered seeds or plants.** The mechanical transfer of genetic material outside of natural reproductive methods and between genera, families or kingdoms poses great biological risks, as well as economic, political and cultural threats. We feel that genetically engineered varieties have been insufficiently tested prior to public release. More research and testing is necessary to further assess the potential risks of genetically engineered seeds. Further, we wish to support agricultural progress that leads to healthier soils, genetically diverse agricultural ecosystems and ultimately healthy people and communities.
